

Assignment: SQL Notebook for Peer Assignment

Estimated time needed: **60** minutes.

Introduction

Using this Python notebook you will:

1. Understand the SpaceX DataSet
2. Load the dataset into the corresponding table in a Db2 database
3. Execute SQL queries to answer assignment questions

✓ Overview of the DataSet

SpaceX has gained worldwide attention for a series of historic milestones.

It is the only private company ever to return a spacecraft from low-earth orbit, which it first accomplished in December 2010. SpaceX advertises Falcon 9 rocket launches on its website with a cost of 62 million dollars whereas other providers cost upward of 165 million dollars each, much of the savings is because Space X can reuse the first stage.

Therefore if we can determine if the first stage will land, we can determine the cost of a launch.

This information can be used if an alternate company wants to bid against SpaceX for a rocket launch.

This dataset includes a record for each payload carried during a SpaceX mission into outer space.

✓ Download the datasets

This assignment requires you to load the spacex dataset.

In many cases the dataset to be analyzed is available as a .CSV (comma separated values) file, perhaps on the internet. Click on the link below to download and save the dataset (.CSV file):

[Spacex DataSet](#)

```
1 !pip install sqlalchemy==1.3.9
2
```

```
Collecting sqlalchemy==1.3.9
  Downloading SQLAlchemy-1.3.9.tar.gz (6.0 MB)
    6.0/6.0 MB 81.9 MB/s eta 0:00:00:00:010
  Preparing metadata (setup.py) ... done

  Attempting uninstall: sqlalchemy
    Found existing installation: SQLAlchemy 1.3.24
    Uninstalling SQLAlchemy-1.3.24:
      Successfully uninstalled SQLAlchemy-1.3.24
Successfully installed sqlalchemy-1.3.9
```

✓ Connect to the database

Let us first load the SQL extension and establish a connection with the database

```
1 #Please uncomment and execute the code below if you are working locally.
2
3 #!pip install ipython-sql
```

```
1 %load_ext sql
```

```
1 import csv, sqlite3
2
3 con = sqlite3.connect("my_data1.db")
4 cur = con.cursor()
```

```
1 !pip install -q pandas==1.1.5
```

```
1 %sql sqlite:///my_data1.db
```

```
'Connected: @my_data1.db'
```

```
1 import pandas as pd
2 df = pd.read_csv("https://cf-courses-data.s3.us.cloud-object-storage.appdomain.cloud/I
3 df.to_sql("SPACEXTBL", con, if_exists='replace', index=False, method="multi")
/home/jupyterlab/conda/envs/python/lib/python3.7/site-packages/pandas/core/generic.py
both result in 0.1234 being formatted as 0.12.
```

Note: This below code is added to remove blank rows from table

```
1 %sql create table SPACEXTABLE as select * from SPACEXTBL where Date is not null
* sqlite:///my_data1.db
(sqlite3.OperationalError) table SPACEXTABLE already exists
[SQL: create table SPACEXTABLE as select * from SPACEXTBL where Date is not null]
(Background on this error at: http://sqlalche.me/e/e3q8)
```

▼ Tasks

Now write and execute SQL queries to solve the assignment tasks.

Note: If the column names are in mixed case enclose it in double quotes For Example
"Landing_Outcome"

Task 1

Display the names of the unique launch sites in the space mission

```
1 %sql SELECT DISTINCT launch_site FROM SPACEXTABLE;
* sqlite:///my_data1.db
Done.
Launch_Site
CCAFS LC-40
VAFB SLC-4E
KSC LC-39A
CCAFS SLC-40
```

▼ Task 2

Display 5 records where launch sites begin with the string 'CCA'

```
1 %sql SELECT * FROM SPACEXTABLE WHERE launch_site LIKE 'CCA%' LIMIT 5;
* sqlite:///my_data1.db
Done.
```

Date	Time (UTC)	Booster_Version	Launch_Site	Payload	PAYLOAD_MASS_KG	Orbit	Cust
2010-06-04	18:45:00	F9 v1.0 B0003	CCAFS LC-40	Dragon Spacecraft Qualification Unit Dragon	0	LEO	Spac

2010-12-08 15:43:00 F9 v1.0 B0004

CCAFS
LC-40demo flight
C1, two
CubeSats, 0
barrel of
Brouere
cheeseLEO NAS/
(ISS) (COT
NRO

Task 3

Display the total payload mass carried by boosters launched by NASA (CRS)

```
1 %sql SELECT SUM(PAYLOAD_MASS__KG_) AS total_payload_mass FROM SPACEXTABLE WHERE custom
2
```

* sqlite:///my_data1.db
Done.
total_payload_mass
None

Task 4

Display average payload mass carried by booster version F9 v1.1

```
1 %sql SELECT SUM(PAYLOAD_MASS__KG_) AS total_payload_mass FROM SPACEXTABLE WHERE Booste
2
```

* sqlite:///my_data1.db
Done.
total_payload_mass
14642

Task 5

List the date when the first succesful landing outcome in ground pad was acheived.

Hint: Use min function

```
1 %sql SELECT MIN(Date) AS first_successful_landing_date FROM SPACEXTABLE WHERE landing
2
```

* sqlite:///my_data1.db
Done.
first_successful_landing_date
2015-12-22

Task 6

List the names of the boosters which have success in drone ship and have payload mass greater than 4000 but less than 6000

```
1 %sql SELECT Booster_Version FROM SPACEXTABLE WHERE landing_outcome = 'Success (drone s
2
```

```
* sqlite:///my_data1.db
Done.
```

Booster_Version

F9 FT B1022

F9 FT B1026

F9 FT B1021.2

F9 FT B1031.2

▼ Task 7

List the total number of successful and failure mission outcomes

```
1 %sql SELECT mission_outcome, COUNT(*) AS total_count FROM SPACEXTABLE WHERE mission_o
2
```

```
* sqlite:///my_data1.db
Done.
```

Mission_Outcome total_count

Failure (in flight) 1

Success 98

▼ Task 8

List the names of the booster_versions which have carried the maximum payload mass. Use a subquery

```
1 %sql SELECT booster_version FROM SPACEXTABLE WHERE PAYLOAD_MASS__KG_ = (SELECT MAX (PA
2
```

```
* sqlite:///my_data1.db
Done.
```

Booster_Version

F9 B5 B1048.4

F9 B5 B1049.4

F9 B5 B1051.3

F9 B5 B1056.4

F9 B5 B1048.5

F9 B5 B1051.4
 F9 B5 B1049.5
 F9 B5 B1060.2
 F9 B5 B1058.3
 F9 B5 B1051.6
 F9 B5 B1060.3
 F9 B5 B1049.7

▼ Task 9

List the records which will display the month names, failure landing_outcomes in drone ship ,booster versions, launch_site for the months in year 2015.

Note: SQLite does not support monthnames. So you need to use substr(Date, 6,2) as month to get the months and substr(Date,0,5)='2015' for year.

```
1 %sql SELECT CASE WHEN substr(Date, 6, 2) = '01' THEN 'January' WHEN substr(Date, 6, 2)
2
```

```
* sqlite:///my_data1.db
Done.
```

month_name	Booster_Version	Launch_Site	Landing_Outcome
January	F9 v1.1 B1012	CCAFS LC-40	Failure (drone ship)
April	F9 v1.1 B1015	CCAFS LC-40	Failure (drone ship)

▼ Task 10

Rank the count of landing outcomes (such as Failure (drone ship) or Success (ground pad)) between the date 2010-06-04 and 2017-03-20, in descending order.

```
1 %sql SELECT landing_outcome, COUNT(*) AS outcome_count FROM SPACEXTABLE WHERE Date BET
2
```

```
* sqlite:///my_data1.db
Done.
```

Landing_Outcome	outcome_count
No attempt	10
Success (drone ship)	5
Failure (drone ship)	5
Success (ground pad)	3
Controlled (ocean)	3
Uncontrolled (ocean)	2
Failure (parachute)	2
Precluded (drone ship)	1
